

## PROJECT SPOTLIGHT: GRACE COMMUNITY CHURCH

While Grace Community Church began in 1992, it wasn't until October of 2005 that it moved to a permanent location in Brentwood, TN. Over the past several years, they have continued to build and grow. Structural Wood Systems was excited to provide the glue-laminated members and solid wood roof decking for the church's newest expansion.

SWS Sales Representative Frank Sledge worked closely with Harvest Construction Co., LLC and Fuqua & Partners Architecture on this new worship center.

Pictured above, you can see how the arches meet at the center under a skylight. The natural lighting highlights the beauty of the stained wood. Decorative trusses span between the interior arches (pictured right). Wood pergolas sit at either side of the main entry tying into the tall columns that hold up the front entry trusses (pictured right). SWS is happy to provide yet another customer with our custom laminated materials for their project.
