

Project Spotlight The Lakeway Church

Work at Structural Wood Systems continues during the COVID-19 pandemic. SWS was excited to provide the laminated wood materials for the new sanctuary for Lakeway Church in Lakeway, TX.

Pictured above are photos of the trusses inside the church before the ceilings are installed. The two main trusses were over 100 feet long and had to be assembled on-site. Be sure to check our Facebook page in the coming weeks for photos of the completed project.

The completed trusses (pictured above) were shipped assembled for easier installation in the field.

SWS fabricators pre-fit the large trusses to ensure they go together smoothly at the job-site.

Center trusses set on top of the two main trusses.
