

COMPANY SPOTLIGHT: Argyle Middle School

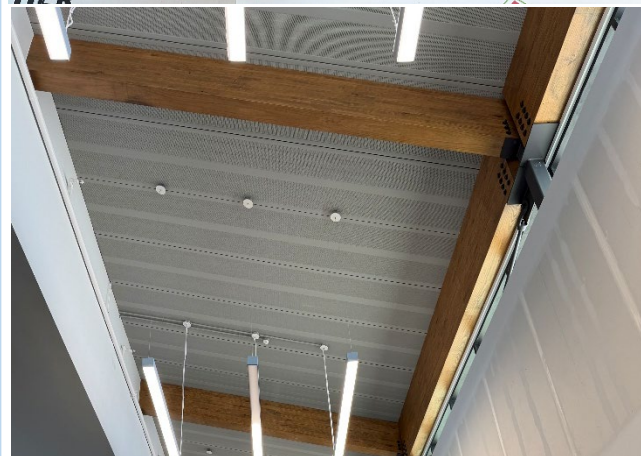

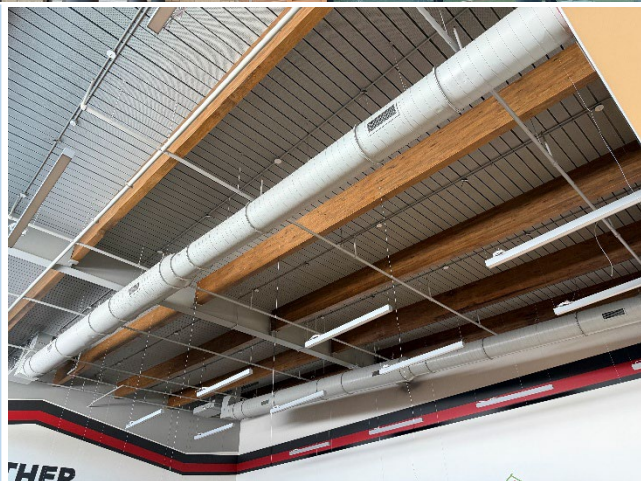

Structural Wood Systems is excited to have supplied Southern Pine glulam beams for Argyle Middle School in Argyle, Texas. R.M. Rodgers, Inc. led the way, serving as our Sales Representative for the project.

As the Argyle community continues to grow, the school district is expanding its facilities to provide students with modern educational spaces.

Southern Pine glulam beams were incorporated into select exterior and interior areas of the school, including entry spaces and corridors. The exposed timber elements bring the natural beauty and character of wood into these spaces while providing the strength and structural performance needed for the building.

Glulam offers architects the flexibility to incorporate substantial structural members into a building while making them an intentional part of the overall design. At Argyle Middle School, the exposed Southern Pine beams add visual interest and warmth to spaces where students, staff, and visitors gather and move throughout the facility.

We are proud to have contributed our Southern Pine glulam to this growing Texas community and appreciate the opportunity to work with R.M. Rodgers, Inc. on another amazing project.
